

Percentage Delay Rate (with Time Independent Clean Control): QuickPay (2009-2012)

Mar 16, 2023

- Sample consists of a “time independent” clean control group
 - This means we keep all small projects.
 - We keep only those large projects that don’t have a concurrent small project in *any* quarter.
- When we analyze congestion effect, we restrict to only one type of contractor. That is, contractors that hold only small project or only large project in the sample horizon.
- Number of offers received is also winsorized.

1 Setup

2 Demeaned delay rate (in percentage)

- Subtract the average pre-quickpay delay rate from each observation

3 Summary statistics

4 Baseline Regressions

$$PercentDelay_{it} = \beta_0 + \beta_1 Treat_i + \beta_2 Post_t + \beta_3 (Treat_i \times Post_t) + e_{it}$$

Variable	SB.Mean	SB.Std Dev	SB.5%	SB.95%	SB.Obs	LB.Mean	LB.Std Dev	LB.5%	LB.95%	LB.Obs
Percentage delay	3.88	25.08	0.00	14.07	45944	5.69	30.93	0.00	33.59	35894

Sample restricted to contractors performing only one type of project.

16.3 Number of tasks

16.3.1 Contractors holding only small or only large projects

Table 16: Contractor Project Tasks and QuickPay reform

	Number of tasks	
	(1)	(2)
$Treat_i$	-0.23*** (0.04)	-0.23*** (0.04)
$Post_t$	0.17*** (0.02)	
$Treat_i \times Post_t$	-0.04 (0.03)	-0.04 (0.03)
Constant	1.73*** (0.04)	
Time fixed effects	No	Yes
Observations	84,391	84,391
R ²	0.01	0.01
Adjusted R ²	0.01	0.01

Note:

*p<0.1; **p<0.05; ***p<0.01

Each observation is a contractor-quarter.

SEs are robust and clustered at the contractor level.

Sample restricted to contractors performing only one type of project.

17 Treatment Intensity

- For contractor k , define $Treat_Intensity_k = (\text{Budget of all small projects before QP})/(\text{Budget of all projects before QP})$
- This measures how much a contractor is affected by QuickPay
- The interaction term roughly tells us the additional delay on a given project for every dollar that the contractor earns from small projects.

Table 17: Project Portfolio and QuickPay reform

	<i>PercentDelay_{it}</i>				
	(1)	(2)	(3)	(4)	(5)
<i>TreatIntensity_i</i> (Budget)	-0.85*** (0.12)	-0.38*** (0.11)	-0.44*** (0.11)	-0.51*** (0.11)	-0.52*** (0.11)
<i>Post_t</i>	-0.08 (0.11)	-6.24*** (0.80)

Adjusted R ²	0.001	0.17	0.17	0.21	0.21

Note:

*p<0.1; **p<0.05; ***p<0.01

Each observation is a project-quarter.

SEs are robust and clustered at the project level.

Large projects whose contractor holds small projects are removed.

18 Project portfolio: Spillover effect

18.1 DID on large projects

- Parallel trends does not hold for this so not evaluating.
- Indirect Treat = 1 if Treat_i = 0 and number of small projects > 0
- Indirect_treat_intensity = Indirect Treat \times log(1+number of small projects)
- Subset of large projects only

18.2 DID on small projects (Portfolio Treat)

- PortfolioTreat_i = 1 if small project i has a concurrent large project.
- Treat_i = 1 if project i is a small project.

Table 18: Project Portfolio and QuickPay reform

	<i>PercentDelay_{it}</i>				
	(1)	(2)	(3)	(4)	(5)

Adjusted R ²	0.01	0.18	0.18	0.21	0.21

Note:

*p<0.1; **p<0.05; ***p<0.01

Each observation is a project-quarter.

SEs are robust and clustered at the project level.

Large projects whose contractor holds small projects are removed.

18.3 DID on small projects (Treatment Intensity)

- Archived as not putting in paper

Consider three groups based on contractor's portfolio:

- Group 1: Small projects (with concurrent large projects)
- Group 2: Only small projects
- Group 3: Only large projects

Define the following variables:

- $Treat_Intensity_i = Treat_i \times \log(1 + \text{number of small projects})$
- $Treat_Intensity_i \text{ (Small with large)} = I(\text{Contractor holds large projects}) \times Treat_i \times \log(1 + \text{number of small projects})$
- $Treat_Intensity_Large_i = Treat_i \times \log(1 + \text{number of large projects})$

19 Project Stage

- t indicates the end of the quarter
- We want to get stage of the project at the beginning of a given quarter (before any delays materialize)

$$Stage_{it} = \frac{ActionDate_{t-1} - StartDate_i}{Duration_{i,t-1}} \quad Stage_{it} = \frac{(t-1) - StartDate_i}{Duration_{i,t-1}}$$

19.1 Stage Quintile

19.2 Logged Stage Regressions

Each observation is a project-quarter.

SEs are robust and clustered at the project level.

Sample restricted to non-competed projects.

22.2.2 Four-way interaction

We run the following model:

$$\begin{aligned}
PercentDelay_{it} = & \beta_0 + \beta_1 Treat_i + \beta_2 StartedAfterQP_i + \beta_3 Post_t + \beta_4 Competitive_i \\
& + \beta_5 (Treat_i \times Competitive_i) + \beta_6 (Post_t \times Competitive_i) \\
& + \beta_7 (StartedAfterQP_i \times Competitive_i) + \beta_8 (Treat_i \times Post_t) \\
& + \beta_9 (Treat_i \times Post_t \times Competitive_i) \\
& + \beta_{10} (Treat_i \times Post_t \times StartedAfterQP_i) \\
& + \beta_{11} (Treat_i \times Post_t \times StartedAfterQP_i \times Competitive_i) + e_{it}
\end{aligned}$$

Interpretation:

- β_9 is the difference between treatment effect for competitive and non-competitive projects signed before quickpay.
- $\beta_9 + \beta_{11}$ is the difference between treatment effect for competitive and non-competitive projects signed *after* quickpay.
- β_{11} is our coefficient of interest because it tells us how much of the difference is there due to “aggressive bidding” after the policy.

Table 24: Effect of Competition After QuickPay: Quickpay 2009-2011
