

# First Implementation of QuickPay (2009-2012)

Mar 14, 2021

## 1 Delays over Time

## 2 Notation

- Project  $i$ , Year-Quarter  $t$
- $X_i$  denotes project level controls: initial duration, initial budget, number of offers received
- $\mu_t, \theta_{firm}, \lambda_{task}$ : Year-Quarter, Firm, and Product/Service code Fixed effects
- All continuous variables are winsorized at the 5% level

$$Treat_i = \begin{cases} 1, & \text{if project } i \text{ is a small business} \\ 0, & \text{otherwise} \end{cases}$$

$$Post_t = \begin{cases} 1, & \text{if year-quarter } t > \text{April 27, 2011} \\ 0, & \text{otherwise} \end{cases}$$

### 3 Parallel Trends Test

Let  $Time$  denote  $q$ -th quarter since the beginning of time horizon. For  $Post_t = 0$ , we run the following regression:

$$Delay_{it} = \alpha + \beta_0 Treat_i + \beta_1 (Treat_i \times Time) + \beta_2 X_i + \mu_t + \theta_{firm} + \lambda_{task} + \epsilon_{it}$$

The coefficient of interest is  $\beta_1$ . If this is significant, we would find evidence of a linear time trend before quickpay implementation – violating the parallel trends assumption.

Table 1: Linear Time Trend Before QuickPay

| <i>Dependent variable:</i>          |                              |
|-------------------------------------|------------------------------|
| <i>Delay<sub>it</sub></i> (in days) |                              |
| <i>Treat<sub>i</sub></i>            | −1.10<br>(2.98)              |
| <i>Treat<sub>i</sub> × Time</i>     | −0.01<br>(0.49)              |
| Fixed effects                       | Firm, Task, and Year-Quarter |
| Controls                            | Budget, Duration, Bids       |
| Observations                        | 74,677                       |
| R <sup>2</sup>                      | 0.14                         |
| Adjusted R <sup>2</sup>             | 0.03                         |

*Note:* \*p<0.1; \*\*p<0.05; \*\*\*p<0.01  
Each observation is a project-quarter.  
SEs are robust and clustered at the project level.  
Observations are for quarters before quickpay.

### 4 Baseline Regressions

$$Delay_{it} = \alpha + \beta_0 Treat_i + \beta_1 Post_t + \beta_2 (Treat_i \times Post_t) + \epsilon_{it}$$

$$+ \alpha + \beta_0 Treat_i + \beta_1 Post_t + \beta_2 (Treat_i \times Post_t) + X_i + (Post_t \times X_i) + \mu_t + \theta_{firm} + \lambda_{task} + \epsilon_{it}$$

Table 2: Quickpay 2009-2011

|  | <i>Delay<sub>it</sub></i> (in days) |                   |                   |
|--|-------------------------------------|-------------------|-------------------|
|  | (1)                                 | (2)               | (3)               |
| <i>Treat<sub>i</sub></i>                           | -6.19***<br>(0.50)                  | -3.58**<br>(1.55) | -3.09*<br>(1.59)  |
| <i>Post<sub>t</sub></i>                            | 13.04***<br>(0.52)                  |                   |                   |
| <i>Treat<sub>i</sub> × Post<sub>t</sub></i>        | 3.35***<br>(0.73)                   | 6.88***<br>(0.91) | 6.83***<br>(0.92) |
| Constant   | 33.00***<br>(0.36)                  |                   |                   |
| Year-Quarter Fixed Effects                         | No                                  | Yes               | Yes               |
| Firm Fixed Effects                                 | No                                  | Yes               | Yes               |
| Task Fixed Effects                                 | No                                  | No                | Yes               |
| Duration, Budget, Bids                             | No                                  | Yes               | Yes               |
| <i>Post<sub>t</sub> × (Duration, Budget, Bids)</i> | No                                  | Yes               | Yes               |
| Observations                                       | 173,900                             | 155,638           | 155,638           |
| R <sup>2</sup>                                     | 0.01                                | 0.11              | 0.12              |
| Adjusted R <sup>2</sup>                            | 0.01                                | 0.05              | 0.05              |

*Note:*

\*p&lt;0.1; \*\*p&lt;0.05; \*\*\*p&lt;0.01

Each observation is a project-quarter.

SEs are robust and clustered at the project level.

## 5 Contract Financing

$$CF_i = \begin{cases} 1, & \text{if project } i \text{ receives contract financing} \\ 0, & \text{otherwise} \end{cases}$$

$$\begin{aligned} Delay_{it} = & \alpha + \beta_0 Treat_i + \beta_1 Post_t + \beta_2 (Treat_i \times Post_t) \\ & + \beta_3 CF_i + \beta_4 (CF_i \times Post_t) + \beta_5 (Treat_i \times Post_t \times CF_i) \\ & + X_i + (Post_t \times X_i) + \mu_t + \theta_{firm} + \lambda_{task} + \epsilon_{it} \end{aligned}$$

Table 3: Effect of Contract Financing: Quickpay 2009-2011

|  | <i>Delay<sub>it</sub></i> (in days) |                    |                    |
|--|-------------------------------------|--------------------|--------------------|
|  | (1)                                 | (2)                | (3)                |

| Constant   | 32.18***<br>(0.37)                  |                    |                    |
| Year-Quarter Fixed Effects                         | No                                  | Yes                | Yes                |
| Firm Fixed Effects                                 | No                                  | Yes                | Yes                |
| Task Fixed Effects                                 | No                                  | No                 | Yes                |
| Duration, Budget, Bids                             | No                                  | Yes                | Yes                |
| <i>Post<sub>t</sub> × (Duration, Budget, Bids)</i> | No                                  | Yes                | Yes                |
| Observations                                       | 173,900                             | 155,638            | 155,638            |
| R <sup>2</sup>                                     | 0.01                                | 0.11               | 0.12               |
| Adjusted R <sup>2</sup>                            | 0.01                                | 0.05               | 0.05               |

Note:

\*p&lt;0.1; \*\*p&lt;0.05; \*\*\*p&lt;0.01

Each observation is a project-quarter.

SEs are robust and clustered at the project level.

## 8 Firm's rank order

- Consider a project  $i$  of firm  $f$  in quarter  $t$ .
- Let  $\Pi_{f,2010}$  denote all projects of firm  $f$  in Fiscal Year 2010.
- Define  $\rho_f = \sum_{i \in \Pi_{f,2010}} (Treat_i \times FAO_{if}) / Sales_{f,2010}$ .
- $\rho_f$  is the fraction of revenue a firm earned from small government projects in Fiscal Year 2010.
- Let  $Rank_f = r(\rho_f) / N$  where  $r(\rho_f)$  is the rank statistic of  $\rho_f$  and  $N$  = number of firms. For example,  $r(\rho_f) = 1$  if  $\rho_f = \min(\rho_1, \rho_2, \dots, \rho_N)$ .
- Put simply,  $Rank_f$  is a firm's rank order based on the fraction of revenue it earned from small government projects in FY 2010.

### 8.1 Portfolio Effects: Discrete

- See Jie's notes for details.
- Let  $Rank_f^{(k)}$  be an indicator for firm being in the  $k$ -th tercile of  $Rank$ . Define:

- $Medium_i = Treat_i * Rank_f^{(2)}$
- $High_i = Treat_i * Rank_f^{(3)}$

$$Delay_{it} = \beta_0 + \beta_1 Treat_i + \beta_2 Medium_i + \beta_3 High_i + \beta_4 Post_t + \beta_5 (Treat_i \times Post_t) + \beta_6 (Medium_i \times Post_t) + \beta_7 (High_i \times Post_t) + \epsilon_{it}$$

Table 6: Discrete Portfolio Effects: Quickpay 2009-2011

|  | <i>Delay<sub>it</sub></i> (in days) |                    |                 |                 |                   |
