

Percentage Delay Rate (with Time Independent Clean Control): QuickPay (2009-2012)

Jan 22, 2023

- Sample consists of a “time independent” clean control group
 - This means we keep all small projects.
 - We keep only those large projects that don’t have a concurrent small project in *any* quarter.
- When we analyze congestion effect, we restrict to only one type of contractor. That is, contractors that hold only small project or only large project in the sample horizon.

1 Setup

2 Demeaned delay rate (in percentage)

- Subtract the average pre-quickpay delay rate from each observation

```
## Warning: Using `size` aesthetic for lines was deprecated in ggplot2 3.4.0.
```

```
## i Please use `linewidth` instead.
```

3 Baseline Regressions

$$PercentDelay_{it} = \beta_0 + \beta_1 Treat_i + \beta_2 Post_t + \beta_3 (Treat_i \times Post_t) + e_{it}$$

$$PercentDelay_{it} = \alpha + \beta_0 Treat_i + \beta_1 Post_t + \beta_2 (Treat_i \times Post_t) + X_i + (Post_t \times X_i) + \mu_t + \theta_{firm} + \lambda_{task} + \epsilon_{it}$$

Table 1: Effect of QuickPay on project delay rates

	<i>PercentDelay_{it}</i>				
	(1)	(2)	(3)	(4)	(5)
<i>Treat_i</i>	-1.76*** (0.11)	-1.36*** (0.11)	-1.41*** (0.11)	-0.92*** (0.11)	-0.93*** (0.11)

Constant	1.73*** (0.04)	
Time fixed effects	No	Yes
Observations	84,391	84,391
R ²	0.01	0.01
Adjusted R ²	0.01	0.01

Note:

*p<0.1; **p<0.05; ***p<0.01

Each observation is a contractor-quarter.

SEs are robust and clustered at the contractor level.

Sample restricted to contractors performing only one type of project.

9 Project portfolio: Spillover effect

9.1 Regression 1: DID on large projects

- Sample restricted to large projects only.
- $Treat_i$ is an indicator that equals one for LARGE projects that have at least one parallel small project in the same quarter, and is zero otherwise.

Table 10: Project Portfolio and QuickPay reform

	<i>PercentDelay_{it}</i>				
	(1)	(2)	(3)	(4)	(5)
$Treat_i$	4.41*** (0.31)	0.70*** (0.20)	0.64*** (0.20)	1.15*** (0.20)	1.16*** (0.20)
$Post_t$	-0.10 (0.12)	-13.38*** (1.17)			
$Treat_i \times Post_t$	-1.17*** (0.36)	0.02 (0.26)	0.03 (0.26)	-0.65** (0.26)	-0.56** (0.26)

Task fixed effects	No	No	No	Yes	Yes
Industry fixed effects	No	No	No	No	Yes
Observations	117,787	110,601	110,601	110,601	110,601
R ²	0.01	0.26	0.26	0.30	0.30
Adjusted R ²	0.01	0.26	0.26	0.29	0.29

Note:

*p<0.1; **p<0.05; ***p<0.01

Each observation is a project-quarter.

SEs are robust and clustered at the project level.

Sample restricted to large projects only.

9.2 Regression 2: Incremental effect on small project with existing large project

- $Treat_{i,l}$ is an indicator that equals 1 for small projects with co-existing large projects in a given quarter, and is zero otherwise.
 - This depends on time, though we are not defining it explicitly.
- $Treat_{i,l} = 1 \implies Treat_i = 1$. This means we have:
 - $Treat_{i,l} \times Post_t = Treat_i \times Treat_{i,l} \times Post_t$
 - $Treat_{i,l} \times Treat_i = Treat_{i,l}$
- Large projects with parallel small projects are removed to get a clean control group.

Table 11: (Incremental effect) Project Portfolio and QuickPay reform

	<i>PercentDelay_{it}</i>				
	(1)	(2)	(3)	(4)	(5)

Each observation is a project-quarter.

SEs are robust and clustered at the project level.

Sample restricted to non-competed projects.

15.2.2 Four-way interaction

We run the following model:

$$\begin{aligned}
PercentDelay_{it} = & \beta_0 + \beta_1 Treat_i + \beta_2 StartedAfterQP_i + \beta_3 Post_t + \beta_4 Competitive_i \\
& + \beta_5 (Treat_i \times Competitive_i) + \beta_6 (Post_t \times Competitive_i) \\
& + \beta_7 (StartedAfterQP_i \times Competitive_i) + \beta_8 (Treat_i \times Post_t) \\
& + \beta_9 (Treat_i \times Post_t \times Competitive_i) \\
& + \beta_{10} (Treat_i \times Post_t \times StartedAfterQP_i) \\
& + \beta_{11} (Treat_i \times Post_t \times StartedAfterQP_i \times Competitive_i) + e_{it}
\end{aligned}$$

Interpretation:

- β_9 is the difference between treatment effect for competitive and non-competitive projects signed before quickpay.
- $\beta_9 + \beta_{11}$ is the difference between treatment effect for competitive and non-competitive projects signed *after* quickpay.
- β_{11} is our coefficient of interest because it tells us how much of the difference is there due to “aggressive bidding” after the policy.
