Full Sample – Contractor Experience

2024-08-22

- Let n_i^{task} = Number of projects of the same task held by the contractor in the three quarters before starting project i
- Let n_i = Number of projects held by the contractor in the three quarters before starting project i
- Define:
  - Inexperienced contractor$_i = 1$ if $n_i^{task} = 0$
  - New entrant$_i = 1$ if $n_i = 0$
  - Level of inexperience$_i = 1 - \frac{n_i^{task}}{n_i}$ if $n_i > 0$
  - Level of inexperience$_i = 1$ if $n_{i,k,t} = 0$.

1 Regression results

- For $IE + Treat \times IE + IE \times Post + Treat \times IE \times Post$ using the two discrete metrics, we get:

	Estimate	SE	2.5 %	97.5 %	Hypothesis	z value	Pr(>|z|)
Task inexperienced	1.04	0.15	0.74	1.34	0.00	6.83	0.00

	Estimate	SE	2.5 %	97.5 %	Hypothesis	z value	Pr(>|z|)
New entrant	1.02	0.21	0.61	1.43	0.00	4.85	0.00
