# Percentage Delay Rate (with Time Independent Clean Control): QuickPay (2009-2012)

Feb 03, 2023

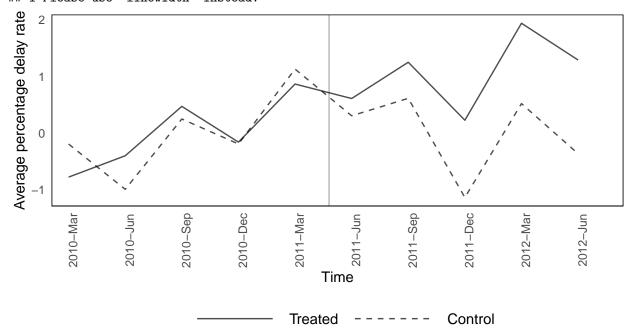

- Sample consists of a "time independent" clean control group
  - This means we keep all small projects.
  - We keep only those large projects that don't have a concurrent small project in any quarter.
- When we analyze congestion effect, we restrict to only one type of contractor. That is, contractors that hold only small project or only large project in the sample horizon.
- Number of offers received is also winsorized.

## 1 Setup

## 2 Demeaned delay rate (in percentage)

• Subtract the average pre-quickpay delay rate from each observation

## Warning: Using `size` aesthetic for lines was deprecated in ggplot2 3.4.0.
## i Please use `linewidth` instead.

# 3 Baseline Regressions

 $PercentDelay_{it} = \beta_0 + \beta_1 Treat_i + \beta_2 Post_t + \beta_3 (Treat_i \times Post_t) + e_{it}$ 

$$\begin{aligned} PercentDelay_{it} = & \alpha + \beta_0 Treat_i + \beta_1 Post_t + \beta_2 (Treat_i \times Post_t) \\ & + & X_i + (Post_t \times X_i) + \mu_t + \theta_{firm} + \lambda_{task} + \epsilon_{it} \end{aligned}$$

Table 1: Effect of QuickPay on project delay rates

|  |          | $P\epsilon$ | ercentDelay | $y_{it}$ |          |

\*p<0.1; \*\*p<0.05; \*\*\*p<0.01

Each observation is a project-quarter.

SEs are robust and clustered at the project level.

Sample restricted to non-competed projects.

#### 16.2.2 Four-way interaction

We run the following model:

$$\begin{aligned} PercentDelay_{it} = & \beta_0 + \beta_1 Treat_i + \beta_2 StartedAfterQP_i + \beta_3 Post_t + \beta_4 Competitive_i \\ & + \beta_5 (Treat_i \times Competitive_i) + \beta_6 (Post_t \times Competitive_i) \\ & + \beta_7 (StartedAfterQP_i \times Competitive_i) + \beta_8 (Treat_i \times Post_t) \\ & + \beta_9 (Treat_i \times Post_t \times Competitive_i) \\ & + \beta_{10} (Treat_i \times Post_t \times StartedAfterQP_i) \\ & + \beta_{11} (Treat_i \times Post_t \times StartedAfterQP_i \times Competitive_i) + e_{it} \end{aligned}$$

#### Interpretation:

- $\beta_9$  is the difference between treatment effect for competitive and non-competitive projects signed before quickpay.
- $\beta_9 + \beta_{11}$  is the difference between treatment effect for competitive and non-competitive projects signed after quickpay.
- $\beta_{11}$  is our coefficient of interest because it tells us how much of the difference is there due to "aggressive bidding" after the policy.

Table 19: Effect of Competition After QuickPay: Quickpay 2009-2011

|  | $PercentDelay_{it}$    |                        |                        |                        |                        |                        |
|--|------------------------|------------------------|------------------------|------------------------|------------------------|------------------------|
|  | (1)                    | (2)                    | (3)                    | (4)                    | (5)                    | (6)                    |
